This article details a correction to: Sustersic M, Mrak M, Svegl P, Kodre AR, Kranjec I, Fras Z, et al. Complete Revascularization and Survival in STEMI. *Global Heart*. 2021; 16(1): 64. DOI: <http://doi.org/10.5334/gh.1040>

Keywords: STEMI; multivessel disease; percutaneous coronary intervention; outcomes

Correction

It has come to the authors' attention that there is an error in (<http://doi.org/10.5334/gh.1040>) [1] which needs to be corrected. In the '*Complications due to coronary interventions*' section, it is stated that:

'The rate of serious complications due to the coronary intervention was 0.04% in the CR group and 0.09% in the IR group.'

However, 0.04 and 0.09 are quotients and not percentages. Instead, as stated correctly in Supplementary Table 6 of the original article, it should be written:

'The rate of serious complications due to the coronary intervention was 4.3% in the CR group and 9.7% in the IR group.'

Competing Interests

The authors have no competing interests to declare.
